HOW AI CHANGES DEVELOPERS' DAILY TASKS

AI drafts code → Developer reviews → Developer tests

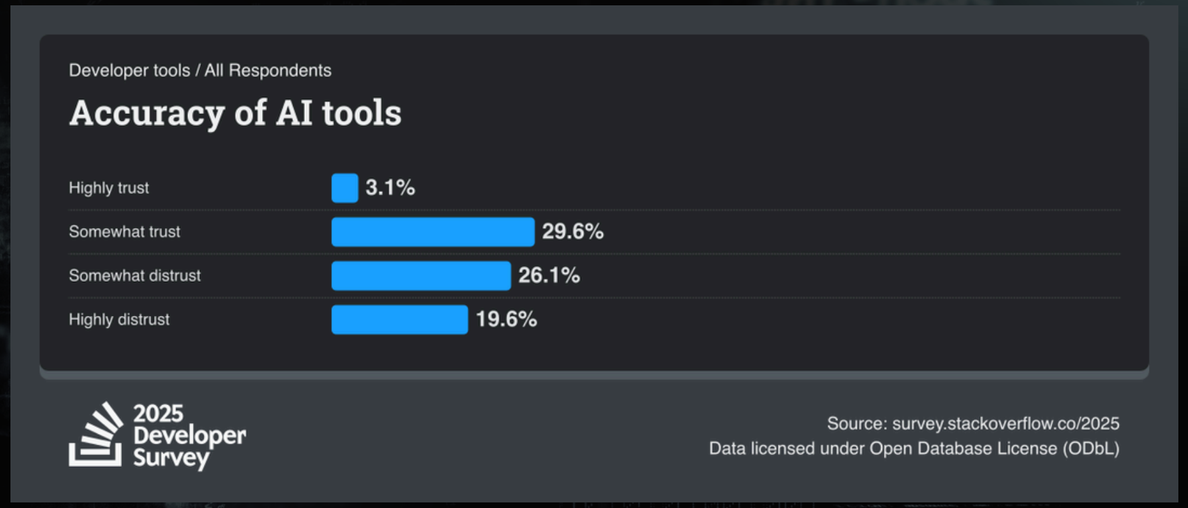

Example:

A login feature

- AI drafts the code.
- A developer checks that incorrect passwords are rejected.

Illustrative example

Source: Stack Overflow Developer Survey, 2025
https://survey.stackoverflow.co/2025/ai

≈46%

of respondents distrusted AI output accuracy.

Job implication: Developers still need to **review** and **test AI-generated code**.
